Version	Version Version number. Is only for information. This function have not additional functionality.

Column	Description	
AGTYP	Operation Type	
AKTIV	Active	yes=1 no=0
ALLOW_MANUAL_C	Allow manual change	only alternative resource: This alternative resource can only be selected manually, if this option has been enabled. The event will be canceled and received with the error message "(aktivaplatz440)Resource cannot be selected when flag "allow manual change" is off" if this option has been disabled and an attempt has been made to select the resource. Note: A change is only possible if a change has been allowed according to the production position (Production position - Allow change has to be allowed). Yes=1 No=0
ALTERNATIV	alternative Parallel Resource	yes=1 no=0
ANDTSTAMP	Date of last change	
ANDUSER	User of last change	
ANTEIL	Time reservation %	only parallel resources: If no setup and edit time was entered, the time of the main operation * time reservation is used as reference. At which % shall the resource be scheduled? Example: The parallel resource is an employee operating four machines at once. He need to be available for the machine at the whole time but only at 25%. If the setup time or processing time is entered, in pre-calculation this input will be ignored. See note above at Setup time.
ANZAHL	quantity	Anzahlfaktor
ERFTSTAMP	Creation date	
ERFUSER	Creation user	
IgnoreOwnResourcecl	Cost not valuate	yes=1 no=0
ItemCode	Routing ID	
LIEGEZEIT	Idle time	
LIEGEZEIT_TYP	--	
MENGE	Quantity Warehouse unit	Only for tools: Needed quantity in warehouse unit of the tool
MENGE_JE	Quantity per Finished Item	
MENGE_ZEITJE	Time by	
NUTZEN	Use	
OPTIMIZED_ID	Activate Optimization	only for alternative resources: If active, at the calculation the lead time will be checked, whether with this resource a faster processing is possible and if yes, the resource will be replaced automatically yes=1 No=0
POS_ID	Routing position (ID)	Link to internal position number from routing position (BEAS_APL.POS_ID)
POS2_ID	Position Number (visible)	
RESOURCENTYP	Resource typ (Tool/Resource)	Tool=W Parallel resource=A Alternativ resource=R
TE	Mach+Labor Time/unit

Column	Description		
ANDTSTAMP	Date of last change		
ANDUSER	User of last change		
BITMAPNAME	Picture		
Block	Locked		Yes=1 No=0 do not change=2
CanCreateWo	Work order can be created	A work order can only be created for this item version if this option is active. Note: If the status is blocked the work order is created but blocked if it is a sub-item. The work order is also be blocked if it is created in an automatic process (via integration hub). The blocking can be avoided by using Production types eg. for a sample production.	Yes=1 No=0
CanDeliver	Delivery note		Yes=1 No=0
CanGRPO	Purchase delivery note	Define, if a Goods Receipt PO can be created	Yes=1 No=0
CanIssueWo	Issue for wo can be created	Defines whether the item version is to be considered in material planning. If a work order has already been created, this option affects the same option in the work order position. See Update Status. Yes / No / None change are selectable.	Yes=1 No=0 None Chagen=2
CanModify	Change allow	If this option is deactivated, the stored routing cannot be changed. But the fields in the item version are still changeable.	Yes=1 No=0
CanModifyWo	Work order change allowed	Defines whether for this item version, changes may be executed in the work order. This option affects the same option in the work order position.	Yes=1 No=0 do not change=2
CanPurchaseInvoice	Purchase Invoice	Describe, if a PO Invoice can be created	Yes=1 No=0
CanPurchaseOrder	PO Order can be created		Yes=1 No=0
CanReservationWo	Reservation for Wo		Yes=1 No=0
CanSaleInvoice	Sales Invoice		Yes=1 No=0
CanSaleOrder	Sales order		Yes=1 No=0
ChangeOpenWorkorr	Status update		
COLORID	Color		
Confirmed	Work order approved	Defines whether for this item version the work order position may be approved. This option affects the same option in the work order position	Yes=1 No=0 do not change=2
Deleted	Entry deleted / blocked		
DESCRIPTION	Description		
ERFTSTAMP	Creation date		
ERFUSER	Recorder		
Release	Release		yes=1 No=0 do not change=2
SortId	Sorting		
STARTBOOKING	Work order material posting	Defines whether material postings may be created for this item version. This option affects the same option in the work order position.	Yes=1 No=0 do not change=2
STARTCAPACITYPL	Capacity planining	Defines whether the item version is to be considered in capacity planning (APS). This option affects the same option in the work order position	Yes=1 No=0 do not change=2

STARTDISPOSITION	Material planning	<p>Related to work order setting "Disposition"          Defines whether the item version is to be considered in material planning.          If a work order has already been created, this option affects the same option in the work order position.          See Update Status. Yes / No / None change are selectable</p> <p>None change means: The status don't change the setting in the work order</p>	<p>Yes=1          No=0          do not change=2</p>
STARTTIMEREQUE!	Login to workorder	<p>Defines whether order time receipts may be created for this item version. This option affects the same option in the work order position. See Update Status.</p>	<p>Yes=1          No=0          do not change=2</p>

Column	Description	
AKTIV	Active	Yes=1 No=0
ANDTSTAMP	Chaged date	
ANDUSER	Chaged by	
BITMAPNAME	Bitmap	
CheckQuantity	Quantity part of total sum	In Time receipt you can insert the quantity for every scrap If the flag "CheckQuantity" is disabled, the system ignore the Quantity You can use this, if you need the possibility to define differnt scraps for one unit...
Color	Color	
ERFTSTAMP	Created date	
ERFUSER	Created by	
FilterAplatz_id	Filter by Resource Type	You can define filter by resource. The user can choose the Scrap reason only, if Resource part of this list, which you can define here
FilterFtTyp	Filter by Workorder Type	You can define the filter by work order type. The user can choose the Scrap reason only, if work order type part of this list, which you can define here
FilterPers_id	Filter by Employee	You can define filter by Employee. The user can choose the Scrap reason only, if Employee (BEAS_PERS.PERS_ID) part of this list, which you can define here
LockDescription	Description not editable	In Time receipt - Scrap reason you can see the description and you can change this description if this flag is active, the user can't change the description Changes allowed=0 Changes not allowed=1
SCRAP_ID	Scrap Id	ID of the scrap reason
SCRAPDESCRIPTIC	Description of this scrap	Description of this Scrap. The Sytem copy this in the Scrap Table from Time receipt. User can change this, if Discription Changeable not disabled.

EXPANDID	Breakdown	Breakdown (expandid)	No=N Always=A Only Shortage=W
FORMEL	Formula		
GUELTIG_BIS	Valid to	best date format: yyyy/mm/dd hh:mm in 24 hour format Time format with am/pm not working.	
GUELTIG_VON	Valid from	best date format: yyyy/mm/dd hh:mm in 24 hour format Time format with am/pm not working.	
INFO	Info		
INPUT_FACTOR	Input unit factor		
INPUT_QTY	Quantity	Determines the requirement in entry units per assembly in Input UoM. Usually, the entry unit is the consumption unit of the selected item,	
INPUT_UNIT	Input unit		
ItemCode	Item code header (BoM ID)	Id of bill of material Linked to header of bom (BEAS_STL_HEADER)	
MENGE_JE	Quantity per Finished Item		
MENGE_LAGER	Quantity Store	Quantity in Stock unit (OITM.InvntryUom) This is only for information. beas don't work with it More information see "MENGE_LAGER"	

MENGE_VERBRAUC	Quantity Consumption	Needed Quantity in Consumption Unit (OITM.U_BEAS_ME_VERBR) Internal beas work with this quantity column beas is filling the quantity automatically if you set input_qty MENGE_VERBRAUCH = INPUT_QTY / INPUT_FACTOR Negativ value allowed	
nonSynch	Synchronisation	Define the synchronisation option	synchronisation on (import: delete and import new)=0 synchronisation on, but don't delete this line=1 don't synchronisate this position=2
OnlyReservation	only Reservation issue		yes=1 no=0
PlaningSysNoSubMa	Planning Method		automatic=0 no=1
POS_ID	Position id	internal position number id (not visible)	
POS_TEXT	Position		
RestChargeOff	IssueRemains from qty		
ROUND_DEC	Rounding Decimal count		
ROUND_TYPE	Rounding Type	type of rounding	no rounding=-1 commercial=0 round up=1 round down=2 multiple of=3
ScrapPercent	Scrap		
SCRIPTS	Script Variant	Define beas scripts for define properties in current BoM Changeable left icon from BoM Position	
SHORTVARIANT	Breakdown Variant	Define, with which variant the subassembly have to breakdown if empty, then use Variant from parent Value can be empty or A-Z	A=A B=B C=C D=D E=E F=F G=G H=H I=I J=J K=K L=L M=M N=N O=O P=P Q=Q R=R S=S T=T X=X Y=Y Z=Z
SHORTVARIANTDEI	Variantendefinition A-Z	Variant Definition A-Z, String with JNJNNNNNNNNNNNNNNNNNNNNNNNNNNNNNN J=Activ, N=not Activ First Position=Version A Second Position=Version B and so on Example JNJNNNNNNNNNNNNNNNNNNNNNNNNNNNNNN = A:Activ, B:not activ, C:Activ Attention: The string need 26 letters. If you insert less then 26 letters, it's not working	
SortId	Sorting	Define the sorting in the bom list self	
StIId	--

U_batchroh	Batch determination	<p>Define automatic batch number / serial number generation</p> <p>can generate the batch automatically for a receipt transaction. Here you can set up whether the batch is entered manually or generated automatically when posing in material.</p> <p>Batch according to material =====</p> <p>If an assembly is posted in, as batch number is determined that one of the first material in the BOM of the assembly which was last posted in. Example: Assembly: "Paste y in container x"  - Bill of Materials: Paste y  --- - 1. issue batch aaa  --- - 2. issue batch bbb</p> <p>If "Paste y in container x" is now produced and posted in, the batch number of "Paste y" of the last posting, i.e. batch "bbb" is assigned.</p> <p>Automatic batch determination =====</p> <p>Batches are generated automatically, at stock correction the next number can be requested.</p> <p>see Batch generation</p> <p>Special case at SAP-posting processes: If the entry field for quantity is left with Ctrl-Tab, the batch assignment screen opens. There is a button "next batch" Clicking there, the next batch number according to SAP - batch determination program is determined and entered to the current field. Batches are always determined automatically.</p> <p>Manual batch input =====</p> <p>If activated, manual batch input is always performed for this item.</p>	<p>batchnum is same as last consumed material=J automatic batch number generation=N manual batch number=M</p>
